Instructions

1. Snap the electric cord into the "T" notch between the two large finger holes.

2. Position the plug against the opposite end of the Plug Puller. Make sure the plug's metal prongs extend beyond the edge of the Puller.

3. Lace a nylon tie through one set of small holes in the Plug Puller and around the plug. Make sure the tie is snugly. For large plugs, use the extra tie in the second set of small holes.

Note: Once attached, the nylon ties cannot be removed except by cutting them. A new tie is needed to re-use the Plug Puller.
